

# Coupling microbial electrosynthesis of platform molecules to organic waste oxidation

French Investissement d'Avenir  
**BIORARE project**  
ANR-10-BTBR-02

**MELISSA WORKSHOP**

8-9 June 2016, Lausanne Switzerland

[www.irstea.fr](http://www.irstea.fr)

# BIORARE technological rationale

# BIORARE technological rationale

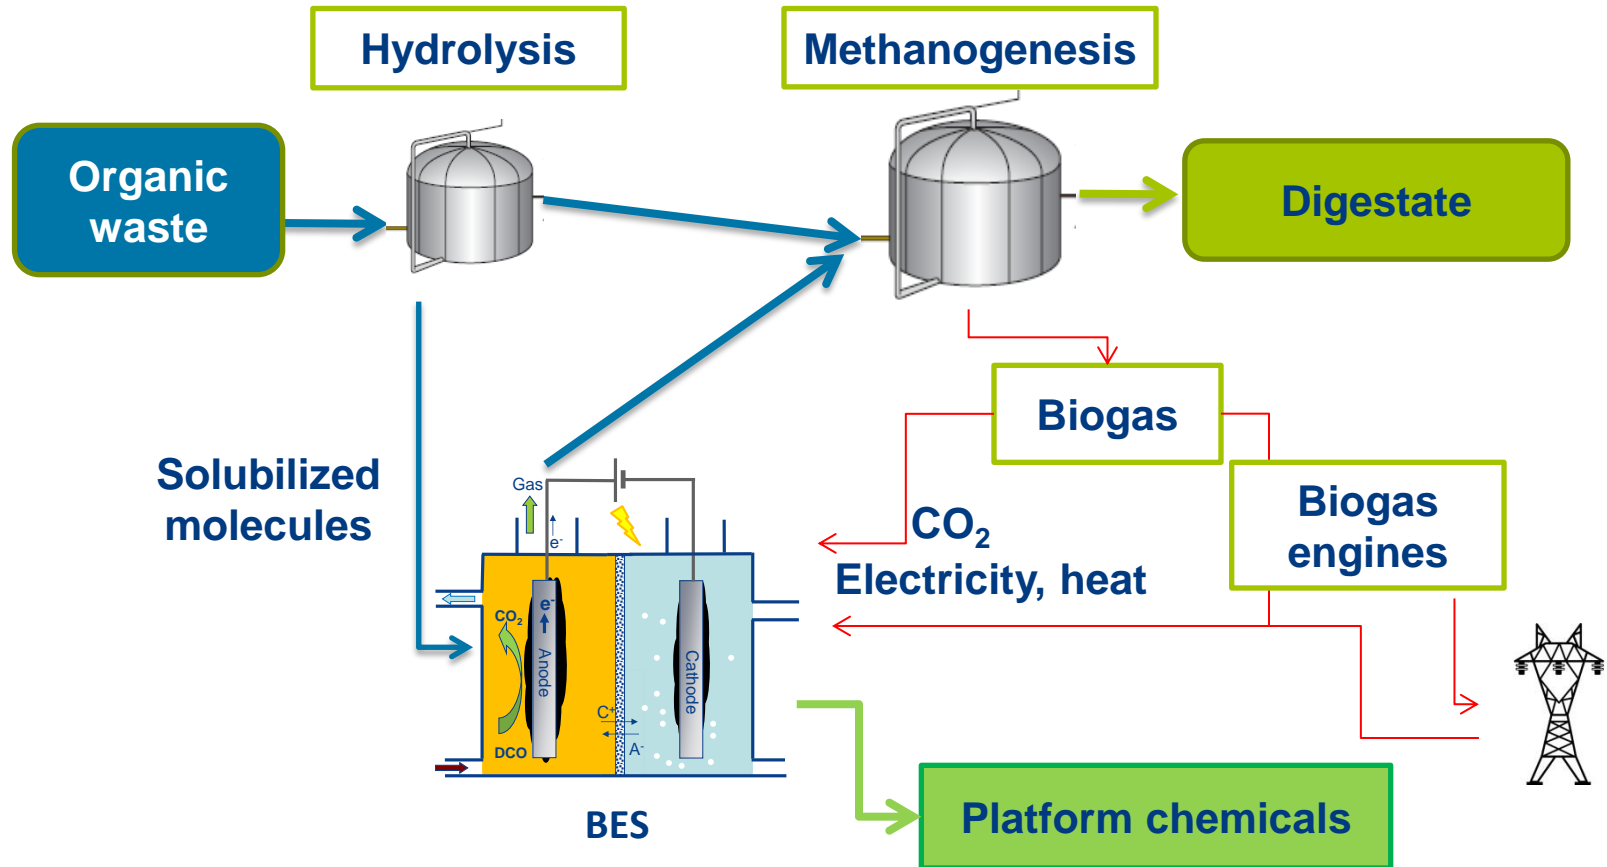

➤ Production of fuel and chemicals from waste material

➤ Separation of synthesized products from contaminated waste streams

➤ Interfacing microbial community metabolic activities with electrical circuits

# BIORARE working scheme

# BIORARE PROJECT STRUCTURE

Specifications for BIORARE concept  
(End: Month 60 - 31<sup>st</sup> Oct. 2016)  
Prolonged until 31<sup>st</sup> May 2017?

# About bioanodes, biocathodes...and coupling!

**BIORARE = how to couple bioanodes to biocathodes?**

Irstea-HBAN, Antony

Let's try to couple by polarizing the cathode...

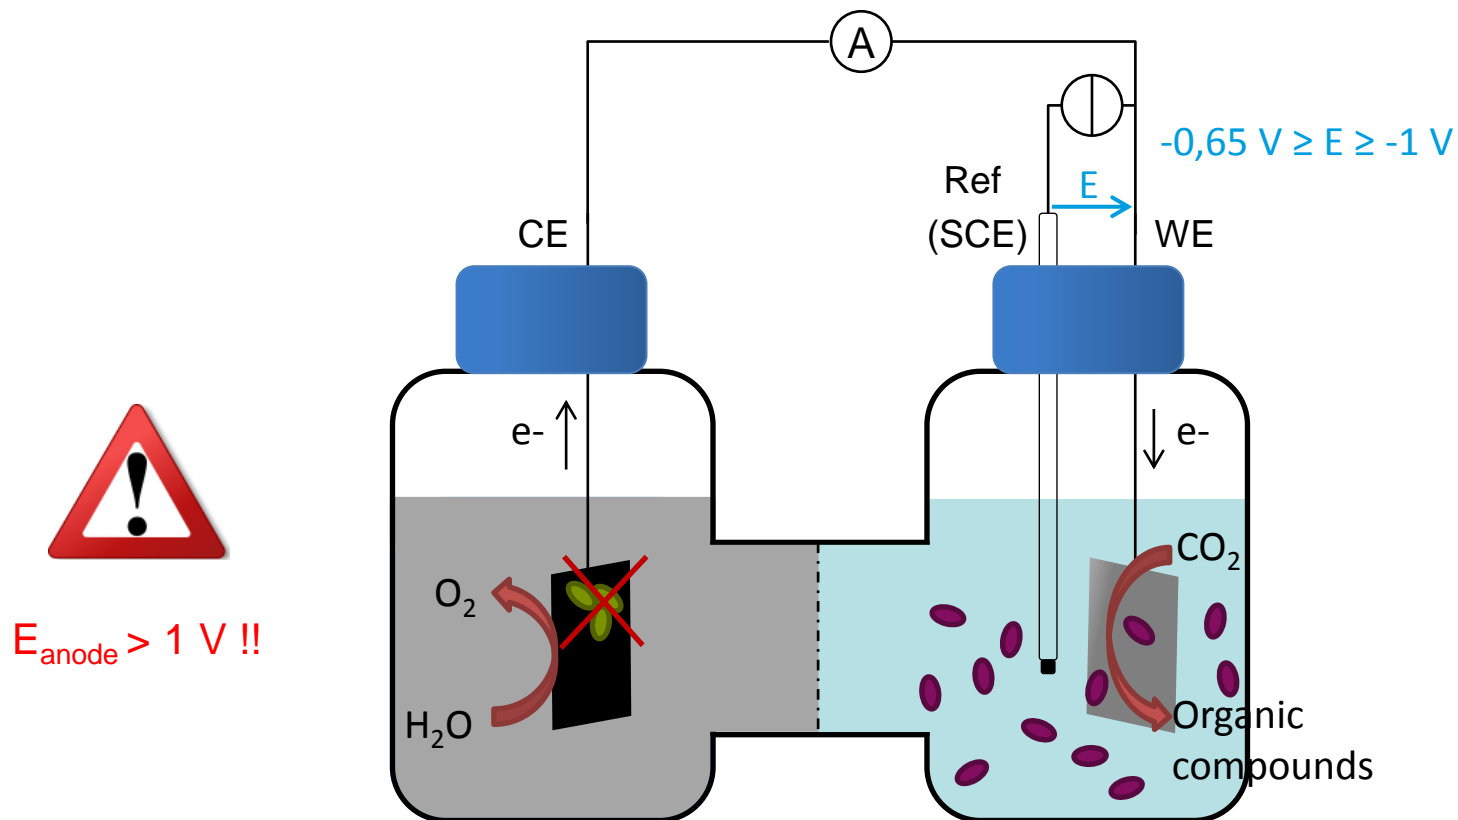

Let's try to couple by polarizing the cathode...

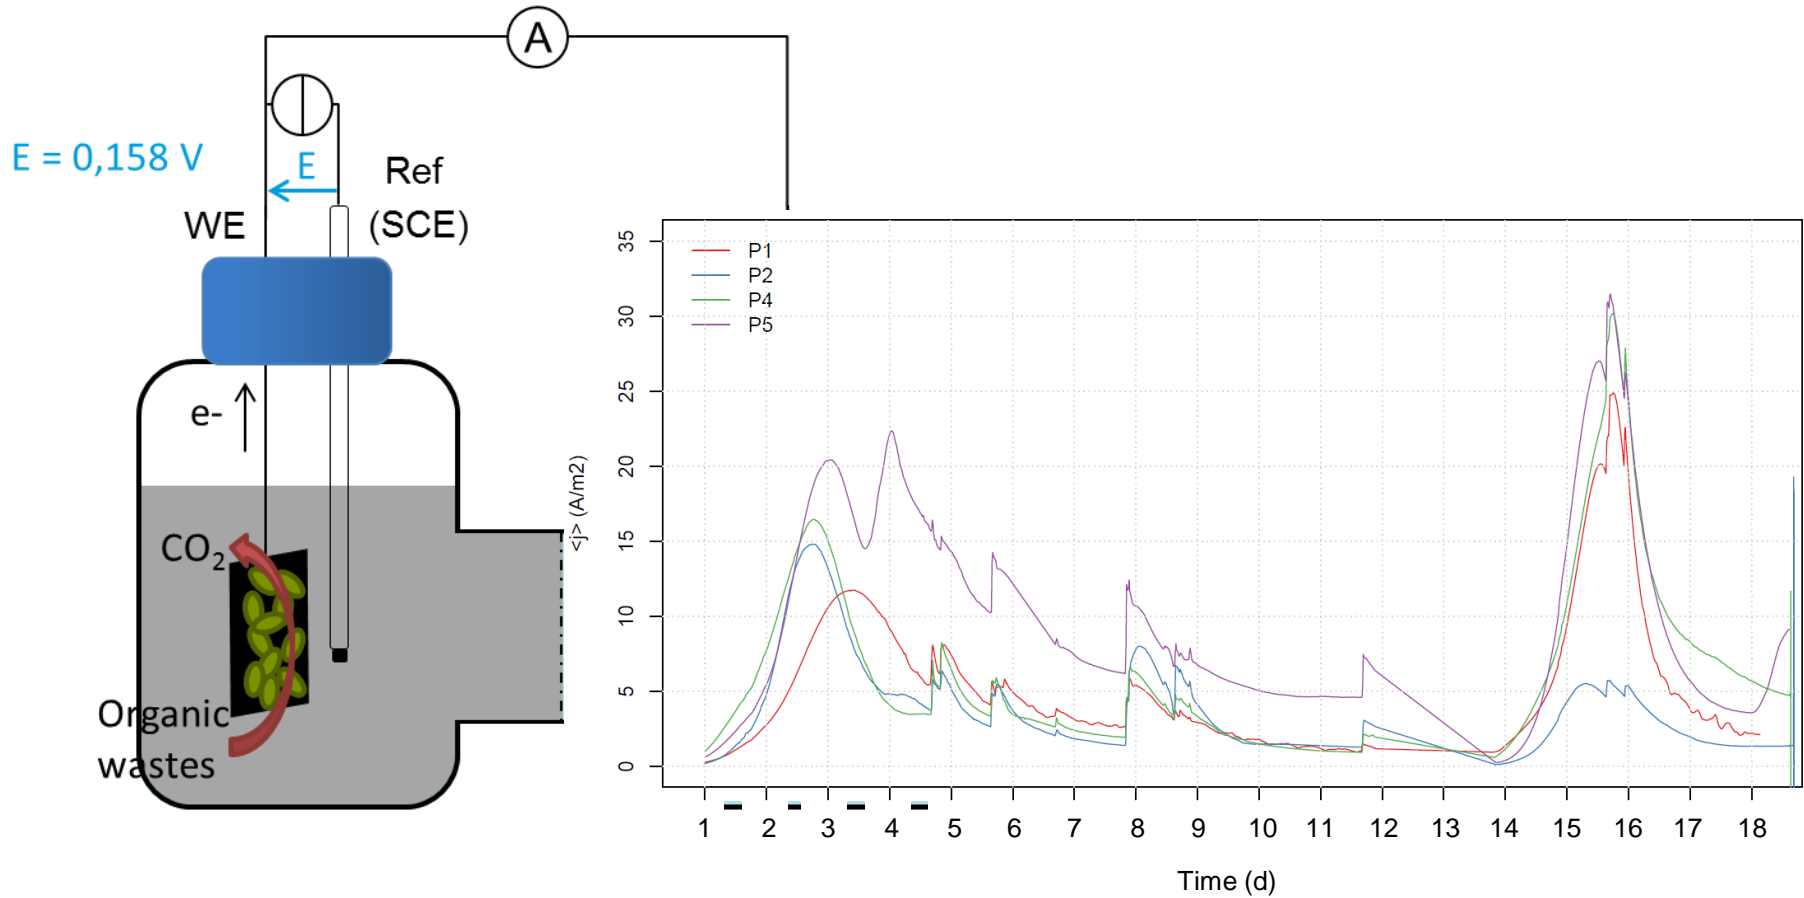

Let's try to couple by polarizing the cathode...

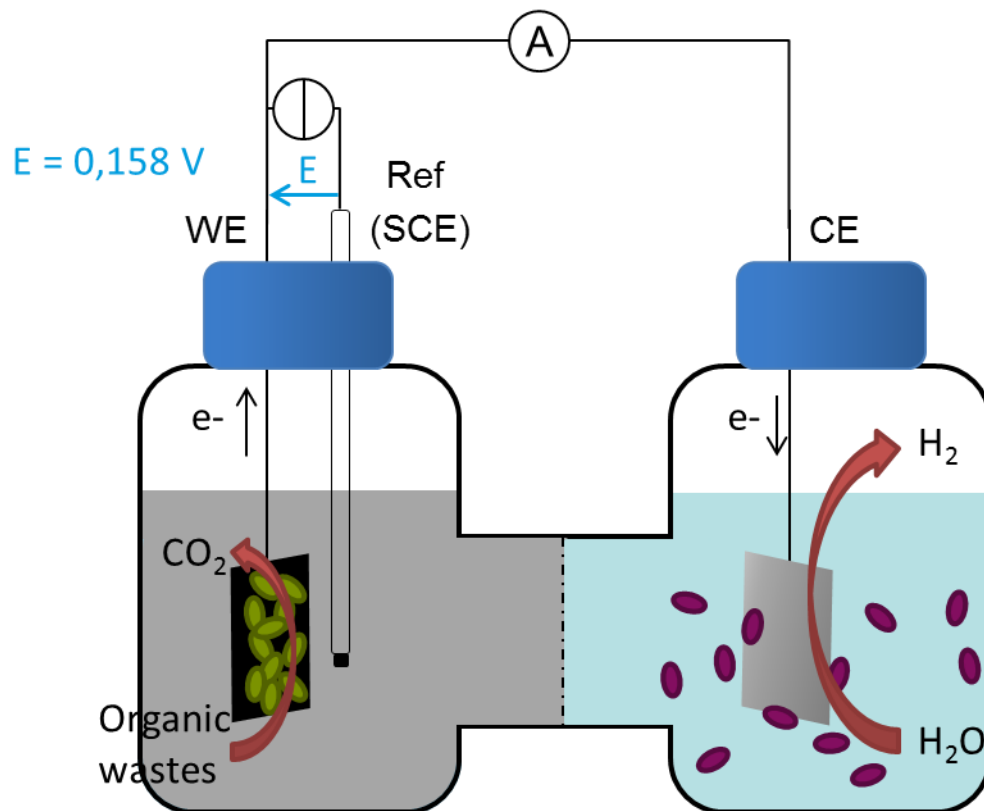

...Failure due to anodic biofilm oxidation !!

# What about polarizing the anode?

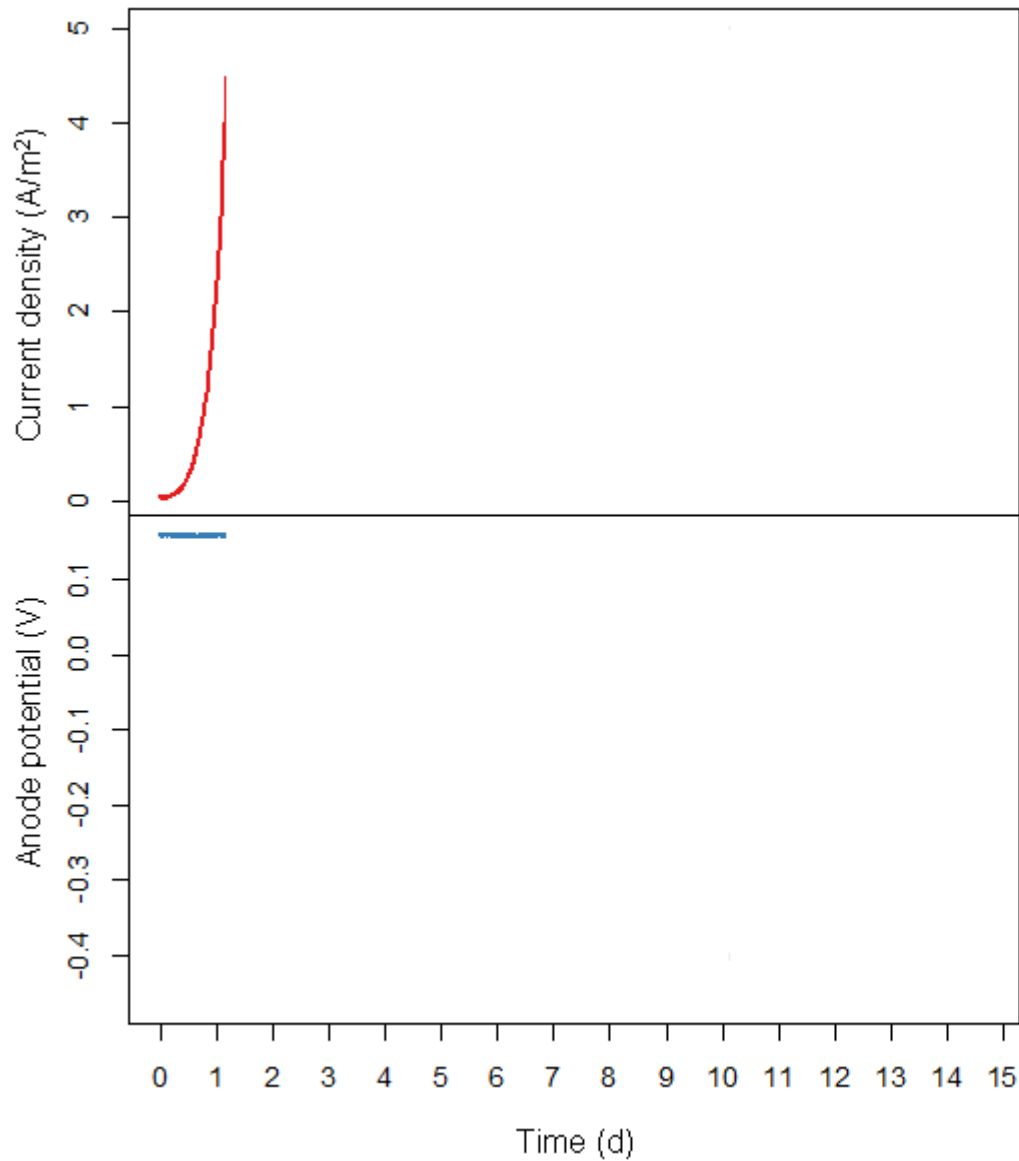

# What about polarizing the anode?

- Unsteady current densities with high maxima
- Hydrogen production resulting in sub-optimal coulombic efficiency at the cathode

# Double regulation: anode polarization $\leftrightarrow$ fixed current density

# Double regulation: anode polarization $\leftrightarrow$ fixed current density

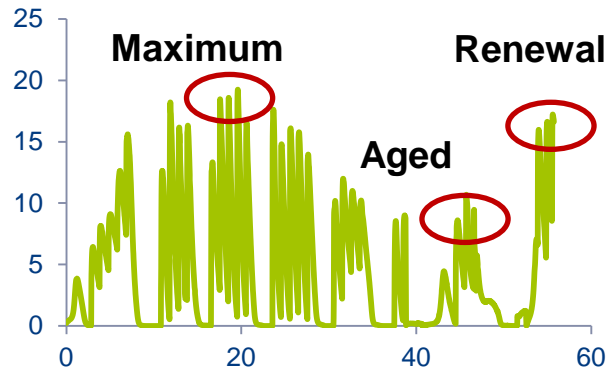

# Double regulation: anode polarization $\leftrightarrow$ fixed current density

# Long term operation of bioanodes fed with biowaste

*Bridier et al, 2015, Bioelectrochemistry*

*Bridier et al., In prep*

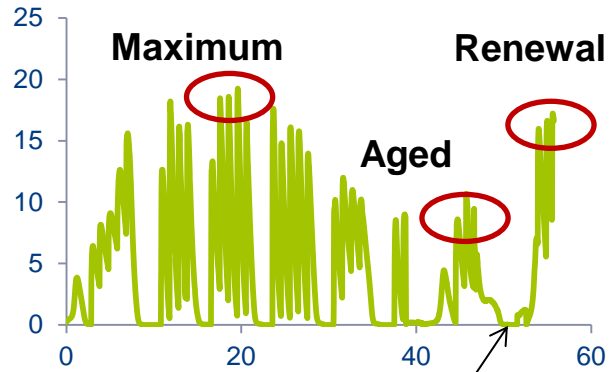

**Chronoamperometry**

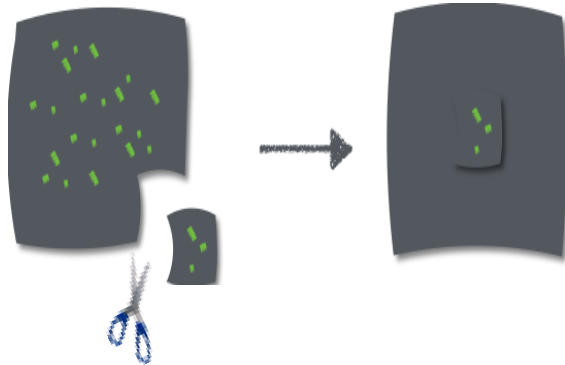

# Long term operation of bioanodes fed with biowaste

*Bridier et al, 2015, Bioelectrochemistry*

Bridier et al., *In prep*

## 16s rDNA sequencing

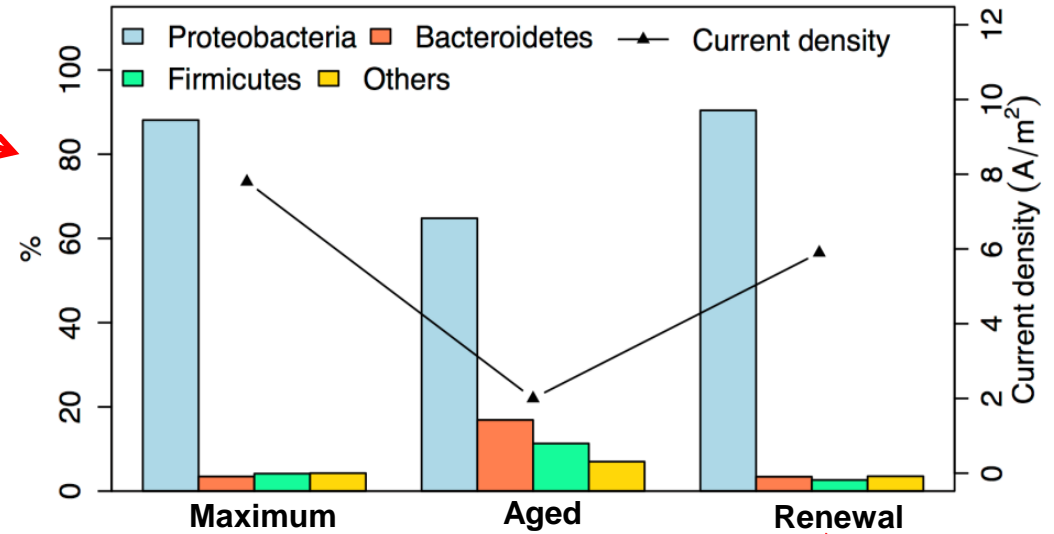

# Long term operation of bioanodes fed with biowaste

Bridier et al, 2015, *Bioelectrochemistry*

Bridier et al., *In prep*

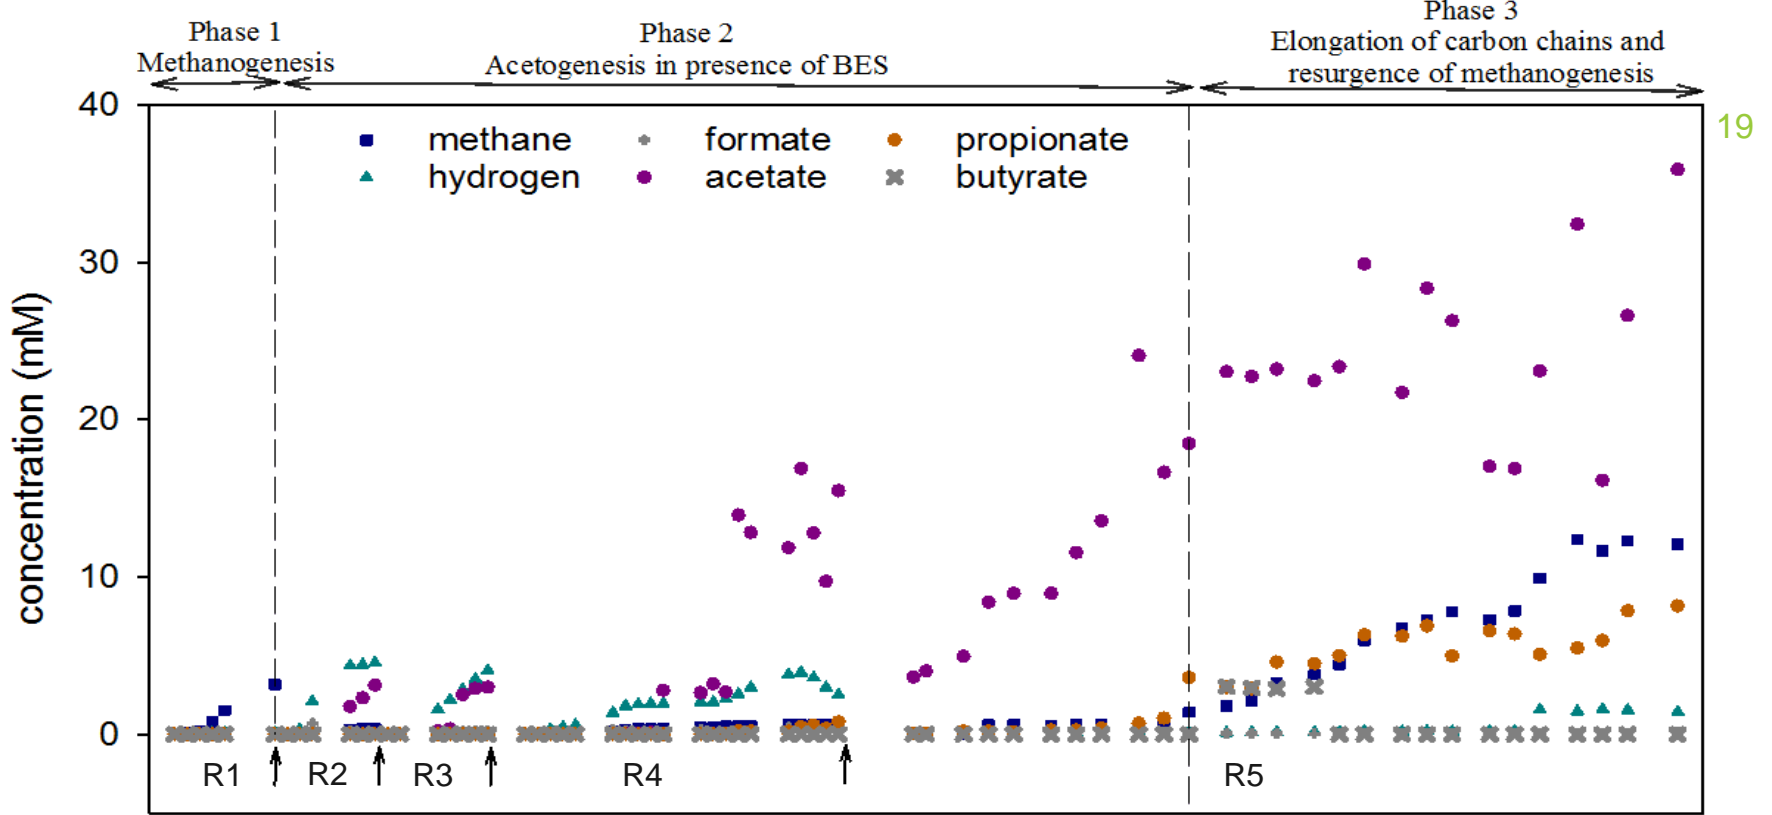

## 16s rDNA sequencing

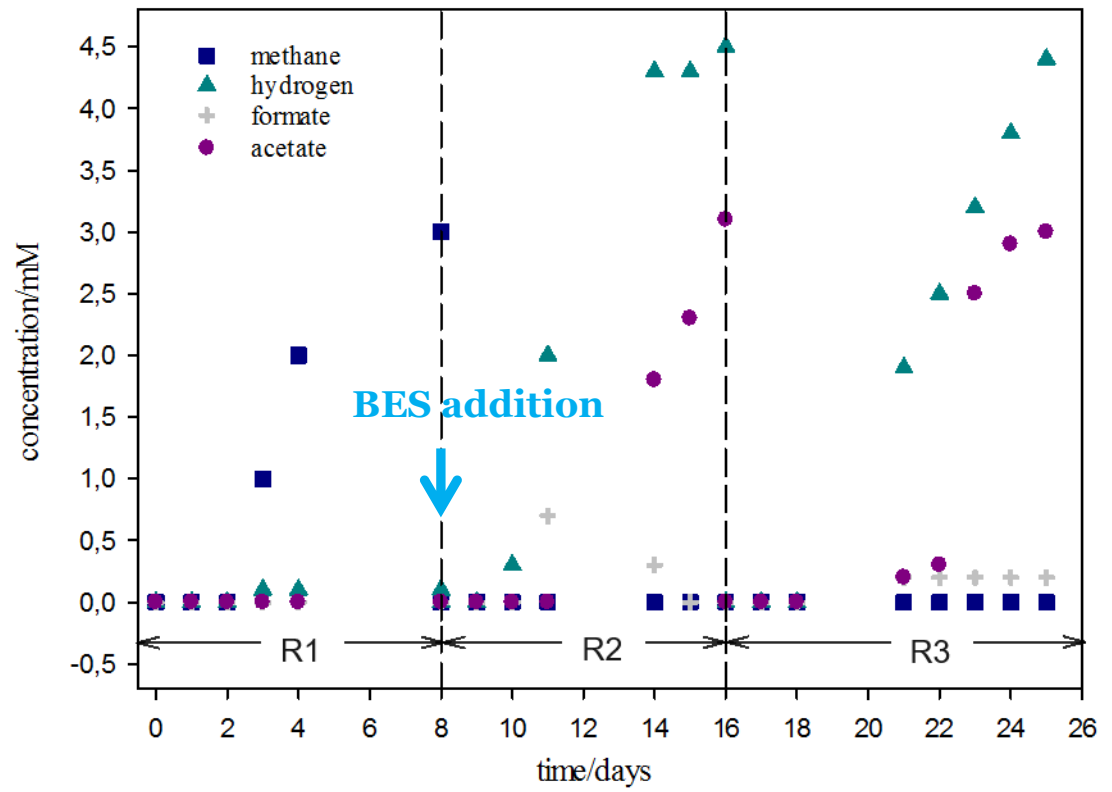

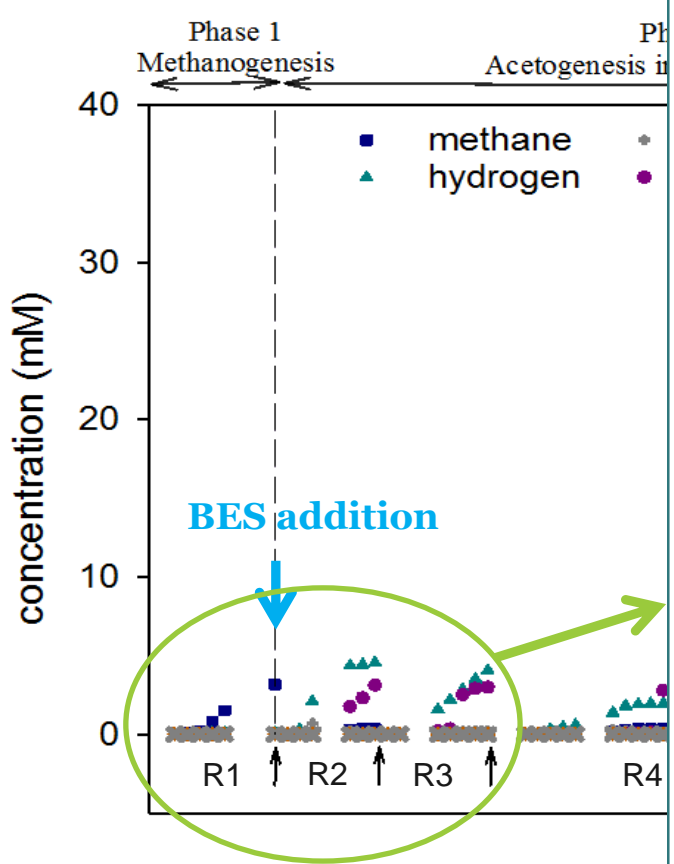

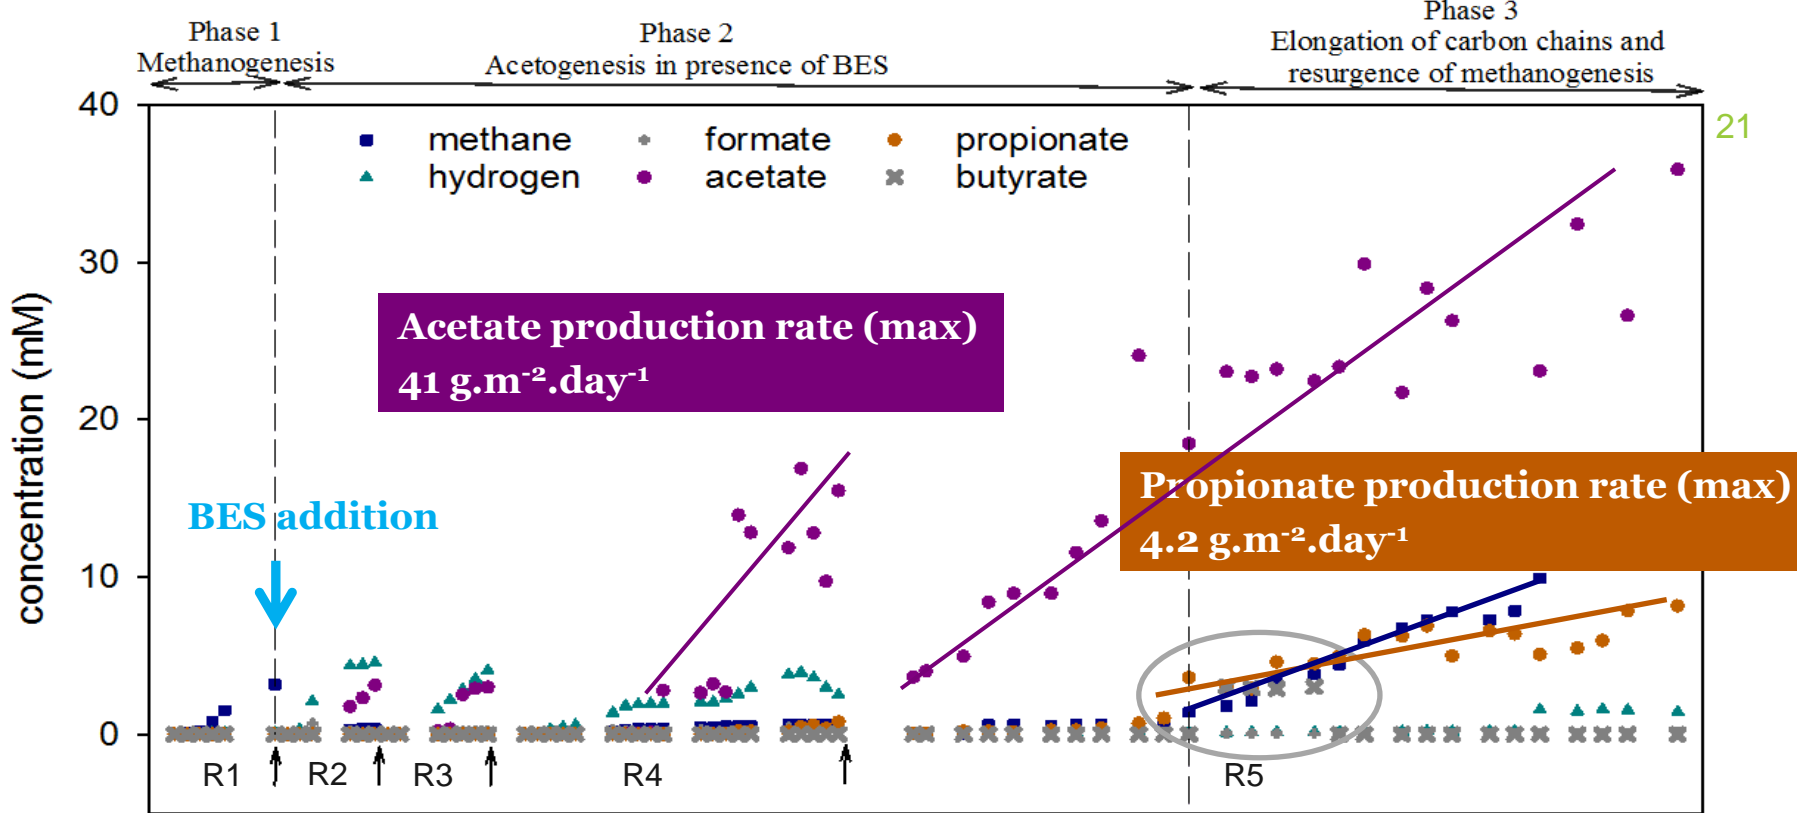

FISH

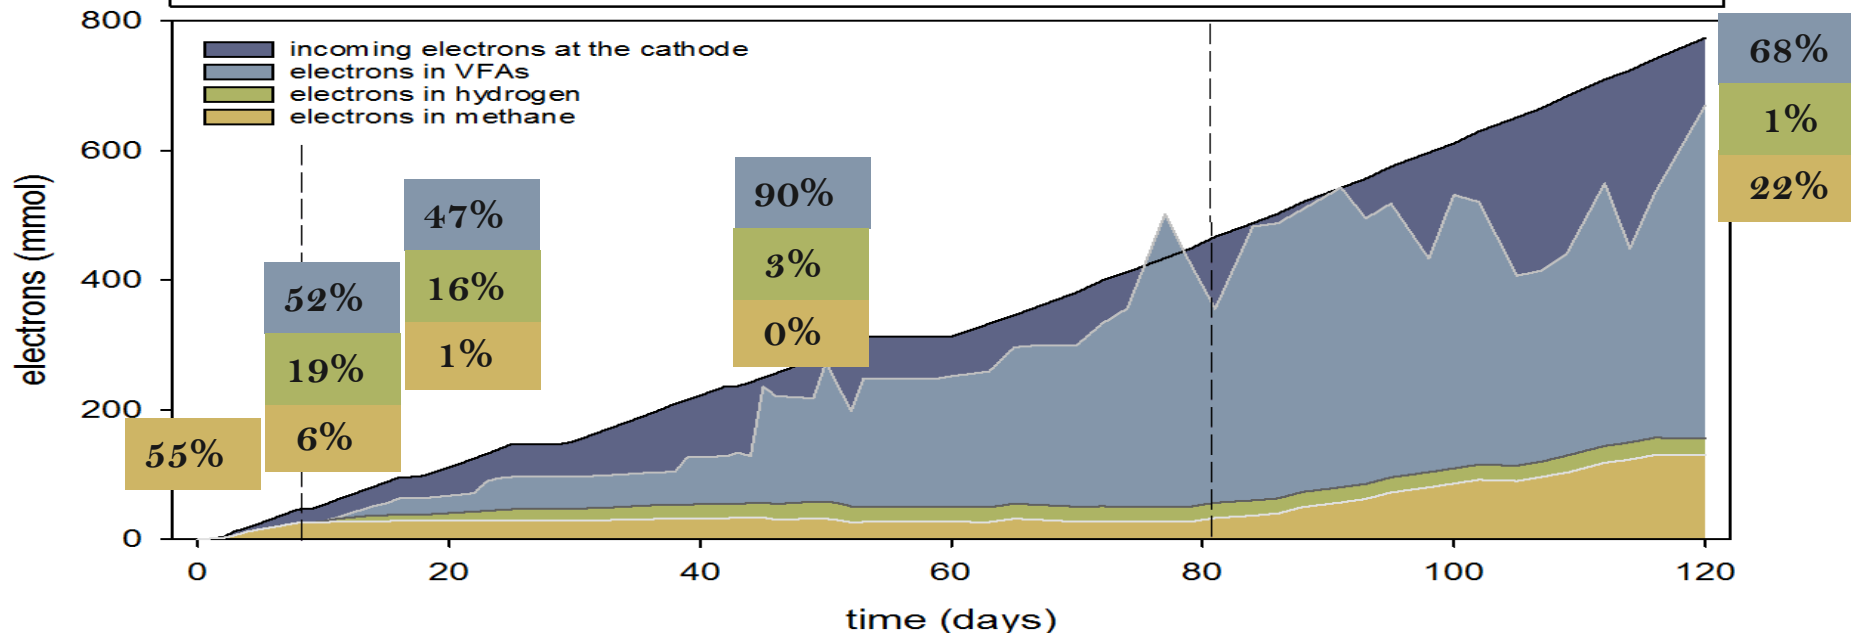

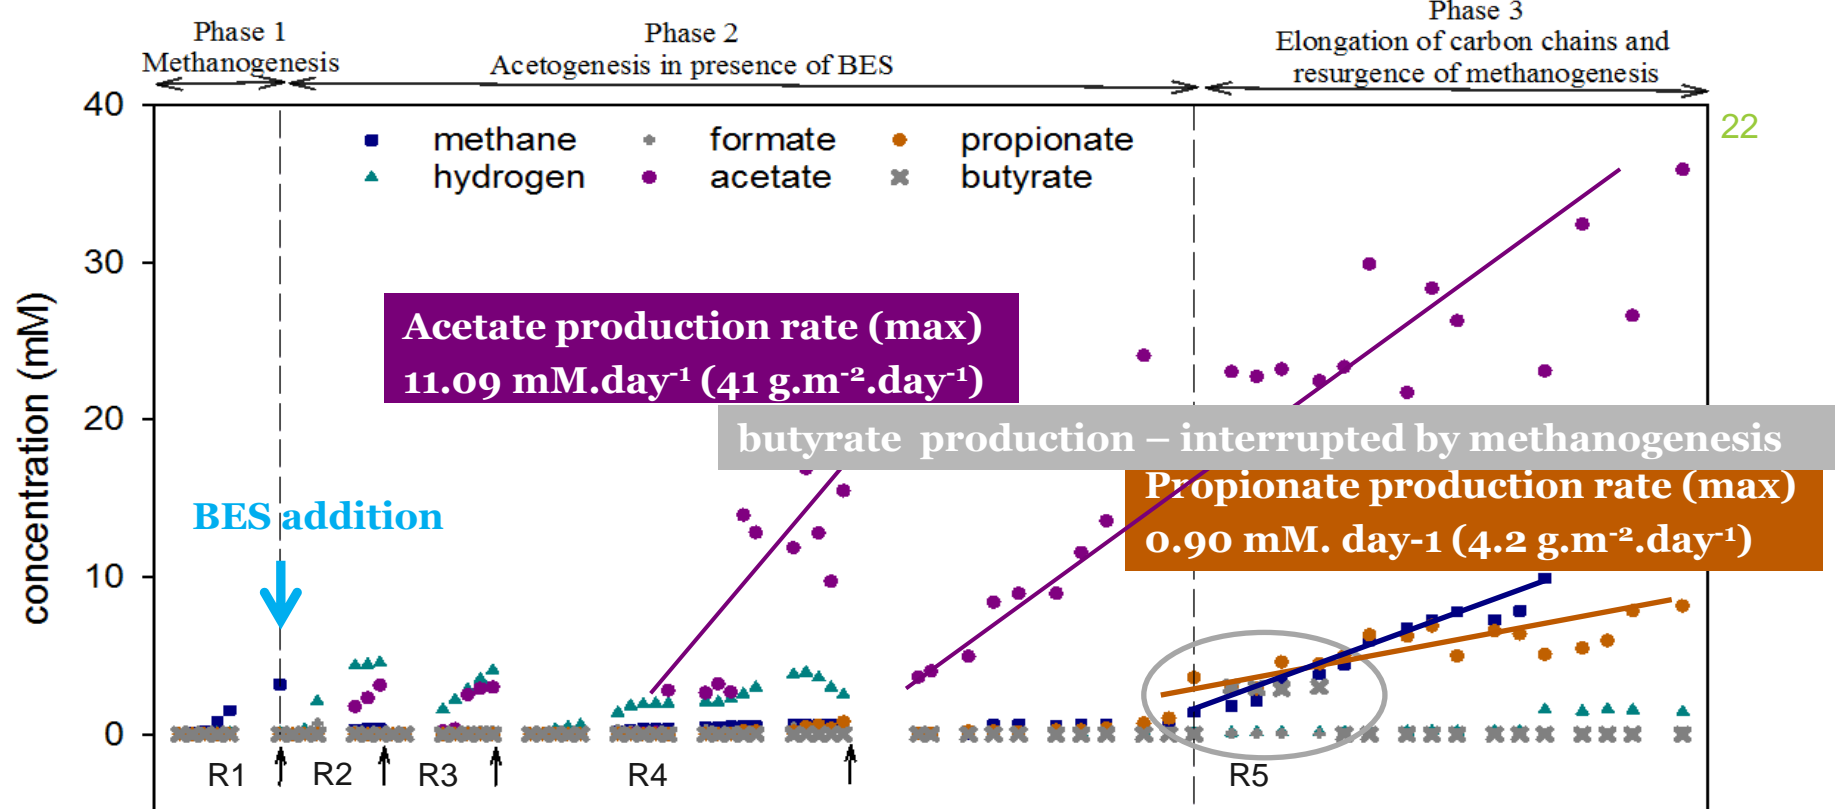

Total bacteria (EUB338) - Geobacter sp. (Geo1A) - Firmicutes (LGC354)

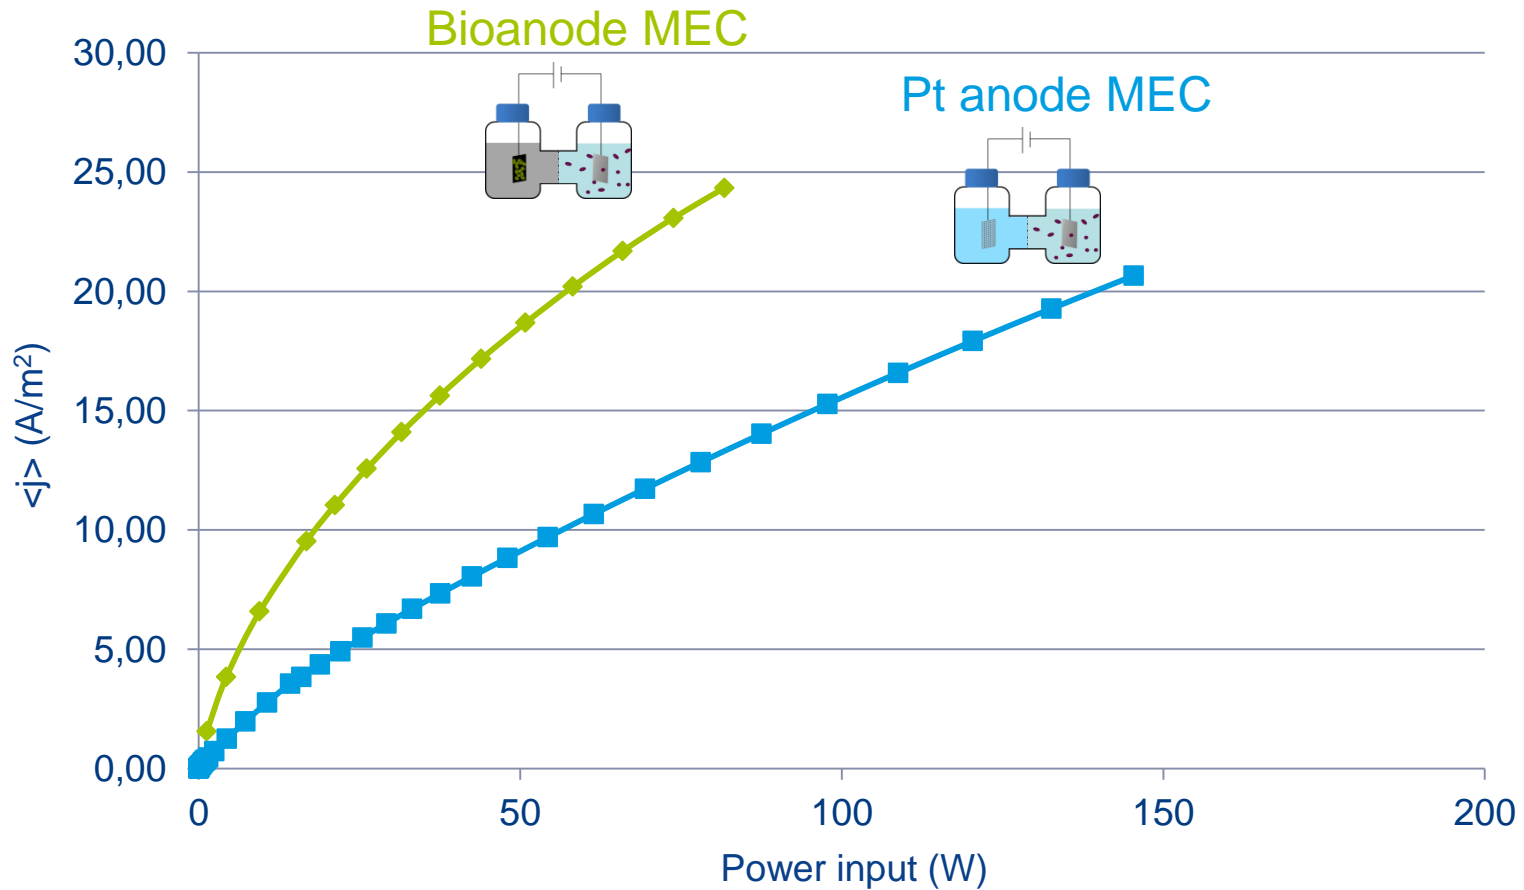

butyrate production – interrupted by methanogenesis

# What about energy efficiency?

# What about energy efficiency?

# What about energy efficiency?

# What about energy efficiency?

➤ **Power input** required is **2,5 to 3,5 times lower** with a bioanode compared to Pt anode oxidizing water

# Conclusion

- System coupling a bioanode and a biocathode with good performances
- Energetic efficiency increase by 2,5 to 3,5 !
- Costs divided by 1,7 to 2 ?

**Table 3** Major cost components of electrofuels process

Item	Base Cost	Cost (\$/GGE)
Electricity Feedstock	\$0.04/kWh	\$2.15
Capital Cost	\$2/yearly GGE	\$0.45
CO <sub>2</sub> Feedstock	\$40/ton CO <sub>2</sub>	\$0.37
O <sub>2</sub> Co-product	\$20/ton O <sub>2</sub>	-\$0.20
Labor and Overhead	\$0.15/GGE	\$0.15
Maintenance and Taxes	4% of TPI	\$0.09
Materials and Waste	\$0.08/GGE	\$0.08
Water Feedstock	\$2/1000 gallons	\$0.01
<b>Total Cost</b>	<b>Supp Calc 8</b>	<b>\$3.09</b>

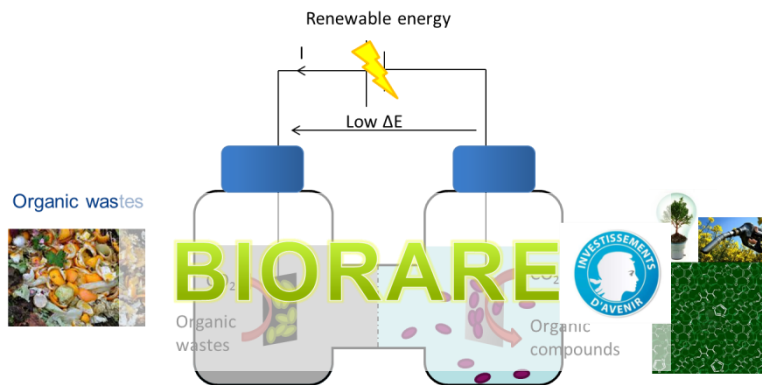

Item	Base Value
Cellular Energy Efficiency	100%
e- Consumed per Butanol Produced	28 e-
Delivered Voltage	1.5 V

Cost components and base values are tabulated to determine the individual cost of specific components as well as the overall cost of fuel production through electrofuels. With each cost item, a sensitivity analysis is provided in the Tornado chart on the *right* to illustrate how the variation in a single parameter influences the overall cost. The *top* of the table/chart itemizes standard engineering parameters, whereas the *bottom* of the table/chart itemizes biological constraints, the latter which each of the Electrofuels projects address

# Conclusion

- System coupling a bioanode and a biocathode with good performances
  - Energetic efficiency increase by 2,5 to 3,5 !
  - Costs divided by 1,7 to 2 ?
- Patent **FR 14 59281** (in total 14 papers ISI-WoS, 3 patents up to now for the project)
  - BIORARE technology from TRL0 to TRL3
  - TRL4 coming soon (optimized pilot under test)
  - LCA analysis: identification of environmentally sensitive components and first environmental impact evaluations based on virtual scenarii (WP4)
  - Market Study and industrial strategies under progress (WP5)
