

Last night I was lying in bed of my airbnb apartment  
trying to get some sleep and to digest dinner  
and the fact that an astronaut drank  
730 liters of his own urine and sweat  
so we learned yesterday from Ms. Paradiso.  
(a little more information than we needed)  
But prior to consumption by said brave astronaut  
I am sure the urine as well as the sweat had been treated

but the reason I could not sleep was the fact that  
I had no idea what  
methanogenic fermentation nor  
hydrothermophilic dialysis is.  
In reality I can't even pronounce it properly  
So I looked it up on Wikipedia  
and that made things worse  
because that didn't help at all

But I was ok with that because the moral of the story is that I was staying in a huge apartment with amazing views on the lake

booked on Airbnb

at half the price of the nearby hotel

and the realization that you really don't need to understand disruptive technologies in order to use them

and this is what this presentation is about

# Space Technology empowers the Transition to a Circular Economy

8-jun-16

MELISSA  
IPStar BV

Space research Consortium  
Technology Transfer Partner

A journey to Mars or a lunar base requires:

- the use of a (closed) regenerative life support system
- that allows for sophisticated recycling of waste such as biomass (plant residu), grey water, feces, urine and CO<sub>2</sub> for
- controlled (autonomous) ultra-efficient water, oxygen and food production

## THE MELISSA PROGRAM

MELISSA was initiated to design, develop and build a closed life support system for long term manned space missions

- MELISSA = Micro-Ecological Life Support System Alternative
- MELISSA is growing. We now have 14 organizations (universities, companies and CRO's)
- approx. 100 scientists + support staff
- large number of subcontractors

## 14 MELISSA PARTNERS

ESA

7 universities:

University Guelph, Canada,

University Ghent, Belgium

University Mons, Belgium

University Blaise Pascal, France

University Barcelona, Spain

University Lausanne, Switzerland

University Napoli, Italy

2 Institutes:

SCK-CEN, Belgium

VITO, Belgium

3 companies:

IPSTAR BV, The Netherlands

Sherpa Engineering S.A., France

EnginSoft S.p.a., Italy

1 foundation:

The MELISSA Foundation, Belgium

IPStar

the huge array of technology challenges in space are identical to the 'big' problems on earth:

WATER

WASTE

**CIRCULARITY IS PART OF THE SOLUTION**

FOOD

ENERGY

IPStar

- IPStar was founded in 2005 to look after technology transfer opportunities
- IPStar is member of the MELiSSA consortium which brings a privileged position
  - access to all know-how and technology developed over decades
  - 2 x per year MELiSSA meeting
  - frequent contacts with members and ESA
  - use of facilities ESA (meeting / conference rooms and labs)

## VISION & MISSION

### VISION

In order to achieve sustainable growth for an increasing world population a balanced and equal distribution of resources is a necessity. Circular economic models are a powerful platform to empower this objective.

### MISSION

Cyclical Life support technologies designed for long term human space missions present highly efficient and robust solutions that accelerate the transition to a circular economy.

## CURRENT PROJECTS

*Biobased and circular economic models in the following sectors:*

Agro & Food

Life sciences & Health

Water & Waste

## CURRENT PROJECTS

### Life sciences & health

#### EZCOL BV

- micro organism rhodospirillum rubrum
- decrease of the 'bad' LDL-cholesterol up to 50 %
- ezCOL owner of patent since 2007
- completion of current research phase (Q4 2015)

#### Partners:

- SCK\*CEN
- Umons
  
- Unilever / University Maastricht

# CURRENT PROJECTS

## NautiSAN

- Ballast Water is used in thousands of ships and vessels for stability and maneuverability
- in 2014 IMO enforces the treatment of ballast water
- represents large market: approx. 70.000 require a ballast water treatment system
- MELiSSA technology excellent starting point to develop a BWTS

## CURRENT PROJECTS

### photo bioreactors

- new type of highly efficient high yield photobioreactor to produce different types of algae
- Produces 10-20 x more biomass than conventional reactors
- IPStar is contracted for commercial evaluation and tech transfer
- Applications include: feed, food, pharma, pigments et cetera

#### Partners:

- UBP
- Uni of Nantes

## CURRENT PROJECTS

### Amsterdam Arena

- research urine collection as a nutrient source to fertilize the grass in soccer stadium Amsterdam Arena
- completed first phase of study MELISSA Urine Treatment Unit as base technology

#### Partners:

- UGent
- HAS Uni applied sciences
- Amsterdam Arena

# PROJECTS current and under preparation

## NuMoSa

Mobile sanitation unit: 40 ft container that provides sanitation, water and potentially food

Partners:

- HAS University of Applied Sciences
- UGent
- NuMoSa BV
- (BIC Incubator)

## SEMILLA - Circular Demo, Business and Experience Hub

**CIRCULAR BUSINESS & EXPERIENCE CENTER**

# SEMiLLA - Circular Demo, Business and Experience Hub

and service.

- standalone mobile MELISSA unit
- enablers for circular economy
- Business models: ... as a ...
- service renewal & sharing
- platforms and product life extension.
- Flexible for placing at any location
- virtual meeting place, digital
- tech platform
- scientifically and politically correct
- visions of the future
- Design and function can be tailored to the location/building

© Roland Berger

EDUCATION+Art

Connection between design

and circularity

Exposition for artists

working of the

classrooms (initiation to circularity), space camps

and PhDs

Benefit of ESA-lectures and experiential participations

## SEMiLLA - Circular Demo, Business and Experience Hub

- The MELiSSA technology will be the driving and unifying factor
- Platform for MELiSSA to showcase its unique relevance for the circular economy
- SEMiLLA will be open to 'external' technology
- Increase interaction between MELiSSA - outside world
- boost reversed tech transfer earth → Space
- generate revenues that benefit MELiSSA and non MELiSSA research

## SEMiLLA - Circular Demo, Business and Experience Hub

- a circular hotspot: urban planning, (space) technology and design
- a fablab for energy, water and food management of the future
- a meeting place for entrepreneurs, education and science, governments and society

**Great stories to tell !!**

- Waste processing
- Water recycling
- Air recycling
- Food production & preparation
- Chemical & microbial safety
- System tools

polen en oceanen → transitieruimte → tropisch regenwoud → transitieruimte → verborgen natuur → transitieruimte → marsklimaat → transitieruimte → tuinbouw → transitieruimte →

# Soestdijk Eden Project

## Consortium partners:

- Foundation Eden Soestdijk
- RoyalHaskoning DHV
- Eden Project
- Mecanoo Architects
- Kossmann De Jong
- IPStar BV

## Objectives

- redevelopment into international hub for sustainability, science, eco-art, biodiversity and CE
- exhibition centre & business venue
- biodome, resources, demo, mars-habitat
- biobased restaurants
- autarkic hotel & conference centre

## MELISSA incubator Malaga (Spain)

### Partners:

- University of Malaga
- IPStar BV
- Parque tecnologico de Malaga

### Objectives

- create MELISSA incubator
- Lectorate CE
- promote CE studies & startups

## MELISSA incubator Noordwijk (Netherlands)

### Partners:

- ESA BIC
- IPStar BV
- 12 incubators across Europe

### Objectives

- international dissemination MELISSA tech
- BIC network as basis for network SEMiLLA Hubs
- create business and startups related to CE

## MELISSA Center of Expertise CE 's-Hertogenbosch & Venlo (Netherlands)

### Partners:

- HAS University of Applied Sciences
- AVANS
- KW1C
- Helicon
- Agrifood capital
- Grow campus
- IPStar BV

### Objectives

- create centre of expertise CE
- lectorate CE
- platform for valorization
- CE study: technology, management studies, communication, finance et cetera.

## RegenVillages – Almere (Netherlands)

### Partners:

- RegenVillages (USA/NL)
- Stanford University (USA)
- city of Almere
- IPStar BV

### Objectives

- build completely autarkic village
- design blueprint for replication
- for increasing urbanization

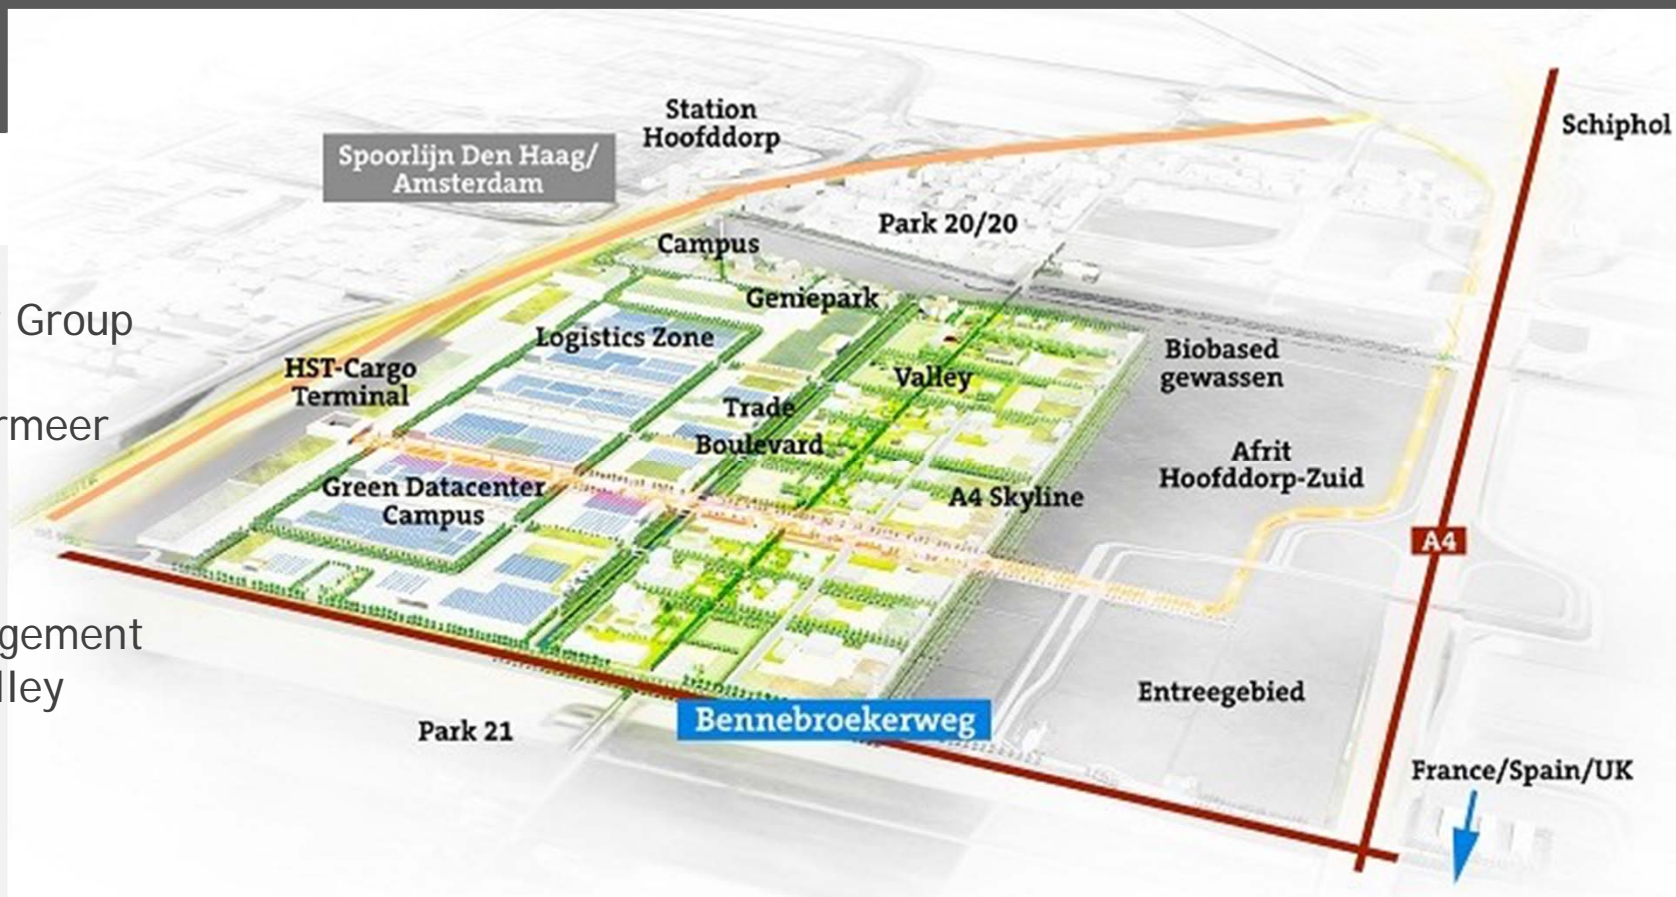

## The Valley – Schiphol (Netherlands)

### Partners:

- Delta Development Group
- SADC
- city of Haarlemmermeer
- IPStar BV

### Perspective

- design water management systems for The Valley
- based on MELISSA
- including recovery nutrients

## SEMILLA – FabLab Amsterdam

### Partners:

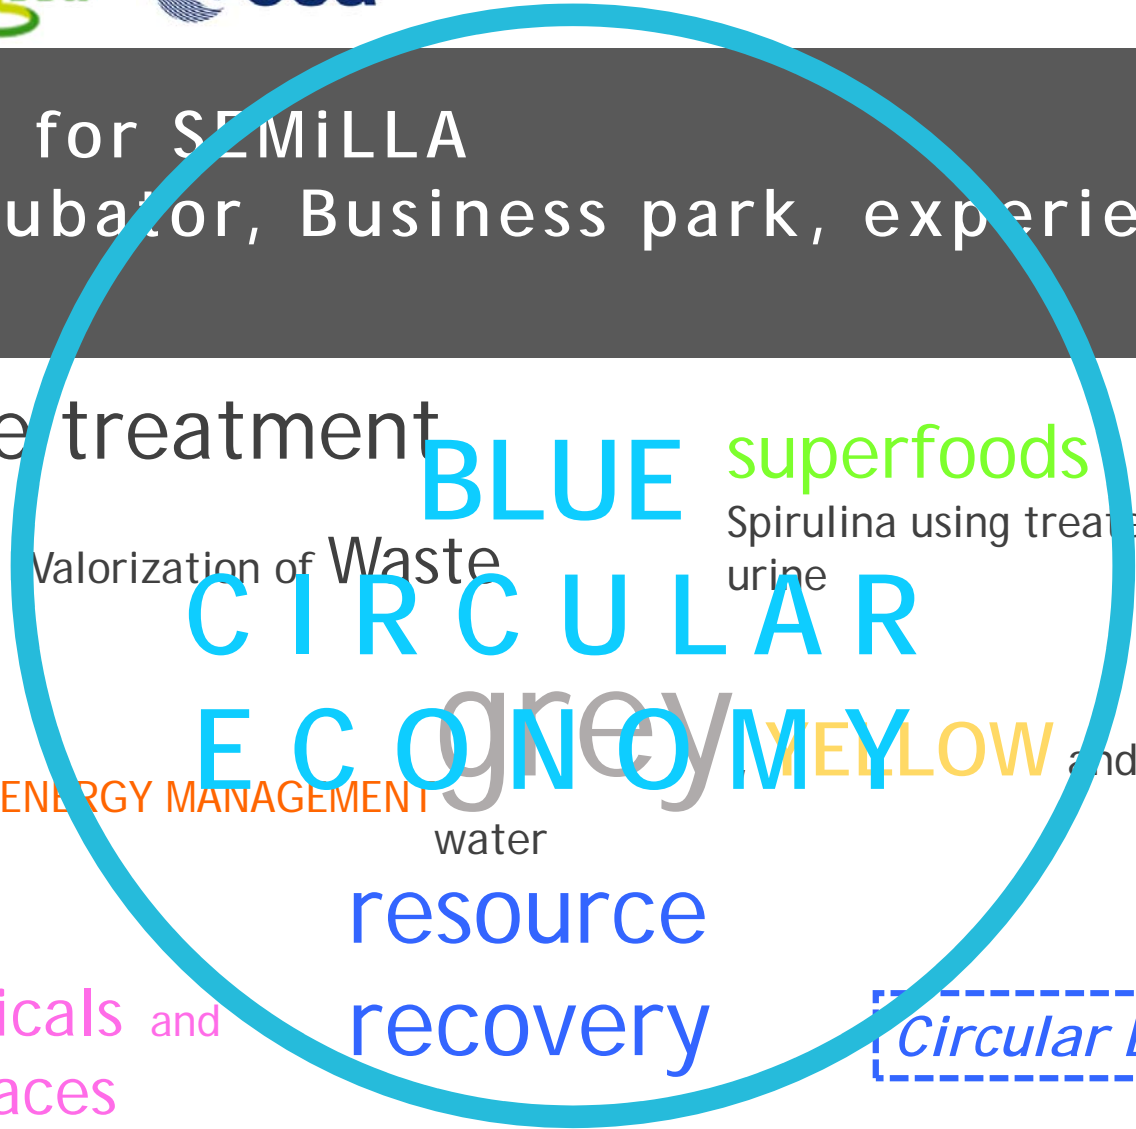

- City of Amsterdam
- IPStar
- Amsterdam Economic Board
- IPStar BV

### Objectives

- Create circular economy fablab
- initiate experiments
- attract entrepreneurs

Candidates for SEMiLLA  
fablab, incubator, Business park, experience hub

We must and we can

A large, white, geodesic dome structure, resembling a modern greenhouse or conservatory, stands in a field of vibrant red flowers. The dome is partially obscured by the branches of a tree in the foreground. In the lower right, a woman in a black top and light-colored pants is walking away from the camera, holding the hand of a small child in a white hat and blue dress. The background is filled with a dense line of green trees under a clear sky.

**So why not JOIN us?**

Circling (or spiralling?) into the future

Thank you
