

# Effect of Earthworms, pig slurry and organic matter on plant growth on Mars soil simulant

Wieger Wamelink<sup>1</sup>, Joep Frissel<sup>1</sup>, Line Schug<sup>1</sup> and Ingrid Lubbers<sup>2</sup>

<sup>1</sup>Wageningen Environmental Research, Wageningen University & Research, <sup>2</sup>Soil Geography and Landscape, Wageningen University

1. No effect of earthworm on the growth of Rucola
  2. Significant effect of pig slurry
  3. Mars soil simulant performs better than poor sand
  4. Worms did survive and produced offspring
- 
1. Tropical worms
  2. Longer experiment to get an effect of the worms
  3. Replace pig slurry by human faeces
